Environmental Treaties and Resource Indicators <http://sedac.ciesin.columbia.edu/entri/>

Overview

International environmental treaties are a primary mechanism by which nations deal with a wide range of environmental and resource management issues that cut across national borders. Information on such treaties and their implementation is widely scattered and often difficult to access. The new Environmental Treaties and Resource Indicators (ENTRI) interface is designed to

enhance access to treaty data and information and to facilitate preliminary analysis. ENTRI's unique system allows users to find status information (i.e., who has signed, ratified or denounced which treaties, and when) for more than 460 environmental treaties. Users can also access full treaty texts and related information easily.

Country Explorer. One of two entry points for accessing treaty information.

Environmental Treaties and Resource Indicators

Sample Outputs

Users entering through the **Treaty Explorer** can pull up treaty tables such as the one below. In this case, the user searched on “natural resource and nature conservation” treaties.

Year of Agreement	Year of Entry into Force	Place of Adoption	Number of Parties	View Full Text
1971	1975	Ramsar	116	
1985	1996	Nairobi	4	

Click on the triangle to get a treaty summary; click on the text icon to read the text; click on the title for a longer treaty description.

Users can add selected treaties and countries to the **Data Cart**. Once a subset is created, users can click on “view cart” and then “view status matrix” to create a status matrix similar to the one shown below. At the end of a session, the user can download these results to a structured file for use in analysis and report generation.
